

Colour selection of Prepainted Roofing

The roof is one of the most dominant features of a structure, for this reason roof colour choice should be one of the first aesthetic decisions made. To assist in this process, Colorsteel® colour samples are available from your local Steel & Tube office or agent.

When choosing a roof colour, the design and style of the building are of primary importance, and serious consideration should also be made towards the surrounding environment, as well as the personalities of the building's immediate environs and its owners.

Spouting and peripheral flashings and even joinery can be colour matched to integrate with the roof, or contrasted to highlight.

On some sites, consideration should be given to the effects of reflectivity off your roof onto adjacent properties. In these conditions, a mid-hue to darker colour is recommended. Such colours being faster drying are also less likely to support lichen growth. Very dark colours on the other hand, are susceptible to showing the results of birds perching and soiling on or above the roof.

Colours shown are as close as normal printing processes allow. Contact your nearest branch of Steel & Tube Roofing Products to view actual COLORSTEEL® prepainted steel samples to confirm the exact colour.
